Date: 29 September 2025

To whom it may concern

I write in response to a request for comments on an application from FarmHannong Co., Ltd. to vary the product registration of Terrad'or Herbicide, containing 700 g/kg Tiafenacil, Water dispersible granule, to include a pre-harvest (late season) use in wheat, remove the current grazing restraint for fallow (i.e. Do not allow livestock to graze treated weeds) and establish a grazing withholding period (WHP) of 7 days for fallow.

This submission is presented on behalf of the Australian Export Fodder Industry through a research project funded by AgriFutures Australia. That research project:

- Is undertaken on behalf of the Australian Export Fodder Industry.
- Is funded and supported by AgriFutures Australia.
- Is conducted on behalf of a range of members across the entire Australian fodder supply chain.
- Reviews current and proposed revisions to market MRLs.
- Provides advice to government on export fodder industry views in relation to the impact on market access of chemicals in use on Australian fodder.

On behalf of the export fodder industry, I advise that based on the information provided by APVMA in the Trade Advice Notice dated September 2025, the industry does not object to the proposed variation to registration or the proposed change in maximum residue limit. No comment is made for grain/seed production or animal products.

Should you have any questions on this submission please do not hesitate to contact me.

Regards

Gerard McMullen  
Consultant to Agrifutures Australia on behalf of the Australian Export Fodder Industry
