Summary of the APVMA's evaluation of ipflufenquin active constituent

The APVMA has evaluated the chemistry aspects of ipflufenquin active constituent (physico-chemical properties, stability, identification, manufacturing process, quality control procedures, batch analysis results and analytical methods) and found them to be acceptable.

The APVMA has completed a toxicological evaluation of ipflufenquin. An acceptable daily intake (ADI) for ipflufenquin was established at 0.048 mg/kg bw/d and an acute reference dose (ARfD) for ipflufenquin was established at 1.2 mg/kg bw.

Toxicologically significant Impurities have not been identified in technical ipflufenquin.

The Scheduling Delegate has made an interim decision to include ipflufenquin in Appendix B, Part 3 (substances not requiring control by scheduling) of the Standard for the Uniform Scheduling of Medicines and Poisons (SUSMP).

The APVMA Health Assessment Team (HAT) has indicated that there are no objections on toxicological grounds to the approval of the active constituent ipflufenquin.

Subject to confirmation of the interim scheduling decision, the APVMA is satisfied that the proposed importation and use of ipflufenquin would not be an undue toxicological hazard to the safety of people exposed to it during its handling and use.

On the basis of the data provided, and the toxicological assessment, it is proposed that the following APVMA active constituent standard be established for ipflufenquin:

Table 12: Proposed active constituent standard for ipflufenquin

Constituent	Specification	Level
Ipflufenquin	Ipflufenquin	970 g/kg minimum

Further information

A Public Release Summary (PRS) of the evaluations of the active and the associated product is available on the [APVMA website](#).
